WHAT AILS THE WORLD !

BY PATHER RYAN.

What alls the world?" the Poet cried-And why does Death walk everywhere? And shies have clouds, and souls have care?" and thus the Poet sang, and sighed.

For he would fain have all things glad, All lives hoppy, all heads bright-Not a day would end in night, Not a wrong would yex a right-And or he sang and he was said.

Then his very grandest thymes loved a mouenful monotor Like a shadow ensuward thrown From a sunset-like a moun familed in a Joy-bell's chimes.

What ails the world? he sang, and asked-And asked and sang-but all in valu-No enswer came to any strain, And no reply to his refrain— The mystery moved 'round him, masked,

"What alls the world?" an echo came—
"Alls the world?" The minstrel bands,
With femous or forgotten hands,
Lift up their lyres in all the lands,
And claut alike, and ask the same—

From him whose soul first soared in song-A thinteened-thousand years away. To him who sang but vesterday, In dying or in deathless lay-What his the world?" comes from the throng.

They fain would sing the world to restand so the coharact incountless keeps As many as the wayes of seas, And as the breathings of the breeze, Yet even when they sing their best-

When o'er the list'ning world there floats Such meledy as 'raptures men— When all look up entranced—and when The sone of fine floats forth—e'en then A dissord creepeth thro' the notes,

heir sweetest harps have broken strings-Their grandest accords have their jars-Like shadows on the light of starsand somehow, something ever mark

The song the prestest minetrel sings, And so each song is incomplete, And not a rhyme can ever round foro the chards of perfect sound,

The tones of thought that e'er surround. The ways wall ed by the Poet's feet. What ails the world?" he sings and sighs Volumes or comoth to his crythe asks the earth and asks the sky— The ochoes of his song pass by Unanswered—and the Poet dies.

Honor to Whom Honor Is Due.

On the Priority of the Discovery and Use of Internal Ancesthesia.

BY J. M. TAYLOR, M. D., OF CORENTH, MISS.

is self-therefore agonts have been used in medicine and state of a spare rib, a servent was not produce an esthesia, viz. sulphuric ether is said to have been used in medicine long before the medical to which they attached a money and the honor of its discovery. This suspicion of the animals and their hand fall being the projection with the same objection is applicable with equal and even greater force to the straing transfer to ask "Why, when Eve was manufactory with the money rides once a year through the wind the money rides once a year through the wind the money rides once a year through the wind the money rides once as year that the same objection of the animals. That is operations were discovery. The same through the wind in particular and the law belowing be a viable with the money rides once as year that the same objection of the animals. That congruence and the composition of the animals with the concealed from no one. That his claim to ask "Why, when Eve was manufactory with the wind the w Nitrous oxide gas was discovered in 1776, by Priestly, but its exhibitating properties were sent day, every invention or discovery having first described by Sir Humphrey Davy in 1800. a large supposed value, is systematically continued with it upon himself and predicted its future use as an ansesthetic in surgery. Doubtless, if he had been a practical surgeon, he would have made the discovery, which was delayed nearly half a century. Sitrous oxide gas was discovered in 1776, by It is hardly too much to say that at the pre-

These are familiar to every tyro in medicine, why the others should be denied a hearing.

The medical profession, from its earliest And if any one can establish priority of dishistory, has recognized the importance of amesthetics. In every age means have been covery by sufficient evidence, then the suspications, of wounds, and of disease. Many agents, both general and local, have been used for that purpose. As long ago as two thousand years, by encient surgeons before mentioned, petitive of the part of the part of the part of the suspicial operations, and backed purpose. As long ago as two thousand years, by encient surgeons before mentioned, petitive of the part of the part of the part of the suspicial operations and the part of the suspicial operations and the part of the suspicial operations and the credit awarded where it is due.

The patent having proved a failure, Morton, true to his money getting instincts, and backed purpose. means used were either unreliable or unsafe, or inaccessible. They were too uncertain, too dangerous, or too complicated to be introduced into general practice. We are struck with wonder when we consider that the identical agent which was destined to more than realize the wildest dreams of the most visconary, was intuity use by the medical profession for three binaried years before its anosthetic properties were discovered. After the experiments of Davy, in 1800, the initiation of airrors gar, not only for another professional and non-professional non-professional non-professional non-professional non-professio second perfectly (amilliar with it. Learned the great war cloud, which was so soon to deors of chemistry dispensed it to admir-lents. Itinerant lecturers, with their in the political horizon. During the few years ong students. It instrant lecturers, with their gas lags, traveled over the country administering to the amusement and edification of the people. It was soon ascertained that the initial attent of the vapor of sulphuric other would produce effects similar to those of the gas. Who first found that out is unknown to me; but the indiscriminate use of the gas and of other, for the same purposes, had become common; and so harmless were they considered, that social gatherings in some parts of the country were considered incomplete without their langhing-gas or ether from. It could not be otherwise than on some of these occasions, inhalation was carried to the extent occasions, inhalation was carried to the extent sume, the matter would have slumbered in of muesthesia, and the participants must often | initum, so far as Dr. Long was concerned, and have witnessed the reception of wounds and injuries without pain. And this it was which at last suggested the practical application and

There are four claimants to the discovery, the subject by an eye-witness of Long's operaall citizens of the United States, and all now tions; a circumstantial account of which is dead. Horace Wells, a dentist of Hartford, given in the Virginia Medical Monthly for Conn., who used nitrons oxide gas; Wm. T. G. Morton, a dentist of Boston, Mass.; Crawford W. Long, a physician of Athens, Georgia, and W. Long, a physician of Athens, Georgia, and Chas, T. Jackson, a chemist, also of Beston, who used sulpharic ether. Wells, Morton and Jackson were all intimately acquainted. The two former had been partners in busines, and each was familiar with the operations of the other, whilst Long knew nothing of them and they knew nothing of him. The discovery, therefore, was equally orginal with them and with him. According to the sould now that with him. Accordinly, it would seem that To persons unacquainted with Dr. Long's nothing more could be required than to ascer-tain which party was the first to intentionally ully produce amosthesia for surgical purposes. Such, however, is not the case; covery of so much importance. Especially for it can be proved beyond the possibility of would such a course appear strange at this adoubt, by testimony, fiving and documentary, time, when it has become so fashionable to that Long successfully used aniesthesia over rush into print on the first impulse. To give Iwo and a half years before the date claimed due weight, therefore, to this seeming indifferby Wells, and four and a half years before the date claimed that claimed by Morton. Yet he has never value of the discovery, it is but just that all been publicly recognized. Jackson's claim to the peculiarities of his character and surthe discovery rests simply upon a suggestion which he claims to have made to Morton, to writer was intimately acquainted with Dr.

on the other. Between the latter, we are not olative of its ethics. Fits location at the time of the other time of the other between the latter, we are not olative of its ethics. Fits location at the time of the other time of the other of Long supersedes both of them. That is, it Jefferson, the county-site of Jackson county, the families of farmers, offering but few opportunities of farmers, offering but few opportunities for surgical operations. It so happened the farmers of meadow and supersedes both of them. That is, it Jefferson, the county-site of Jackson county, the farmers of surgical operations and a few words the farmers of county-site of Jackson county, the farmers of surgical operations and a few words the farmers of county-site of Jackson county, the farmers of surgical operations and a few words the farmers of county-site of Jackson county, which is a fearful that Solomon wrote the farmers of county-site of Jackson county, the farmers of surgical operations and a few words the farmers of county-site of Jackson county, the farmers of county-site of Jackson coun I would remark, however, that Wells is entitled to great credit for his persistent efforts that the inhalation of ether for amusement His convictions were strong, and he certainly an absord with a zeal which merited success. To his example and experiments, Morton was clearly indebted for the course he took; and suggestion of his friend and preceptor, Jackson, gas. The same suggestion of his friend and preceptor, Jackson, gas. The same suggestion, I believe, had been made, to Wells, but after an ineffectual trial of it, he returned to the gas. Without understainly find the provided the most of the course of the grave one step to the great discovery of surgical one step to the great surgical one step to the great discovery of surgical one step to the great discovery of surgical one step to the great discove In the credit of the discovery to Morton.

If it can be clearly established that Long intentionally produced assented to, and the tumor was excised intentionally produced assented to, and the tumor was excised without pain. He repeated the expected the intentionally produced perfect aniesthesia, so long before Morton did, it may be asked, Why should there be any difficulty in the matter? Why did the scientific world decide in Morton's favor? To which it may be answered, in brief, that the whole question turned are living witnessed these operations and have living witnessed these operations and have living witnessed these operations and have

Why did the seienting world deeper Morton's favor? To which it may be answerd, in brief, that the whole question turned upon the date of publication.

Whilst it is conceded that Long may have been the first to use amasthesia, it is claimed that the distinguished surgeons of the Massachusetts General Hospital, who permitted Morton to administer his "Letheon" and the same question will be at issue—whether the State lines, but if we world, or rather that the distinguished surgeons of the unknown, shall be say.

In that institution, published it to the world as in the continued to make the continued to the Rapids. And yet this man was not traveling on business. If they get angry, they will be at issue—whether the State consume three thousand death." Let us not lose either; let us make Death our own, in a richer, deeper, and seed that the people of the boys. If they get angry, they will be at issue—whether the State consume three thousand death." Let us not lose either; let us make Death our own, in a richer, deeper, and stead—this say and not reveling on business. If they get angry, they will be at issue—whether the State consume three thousand death." Let us not lose either; let us make Death our own, in a richer, deeper, and stead—this say to the Christian, "All things are yours—life and death." Let us not lose either; let us make Death our own, in a richer, deeper, and stead—this part of the boys. If they get angry, the beauty of the boys and an enter the boys and an election on the boys and an election of the boys and an election on the boys and an election on the boys and an election on the boys and an election

VOLUME XLII.

his discovery. It is now for the world to de- operations as usually come before a village cide which constitutes the discovery, the first practitioner, in the presence of the physicians use or the first publication of the remedy. If and citizens of the country, never dreaming of the merit lies in the publication I submit that any secret or personal advantage, but, like a He sits the tender leaves among, the merit hese in the publication I submit that the credit is due to the surgeons who made the publication. The first publication ever made on the subject was a paper published in the Boston Medical and Surgical Journal, November, 1846, written by Henry I Eigelow, covery was made by others, and through the November, 1846, written by Henry J. Eigelow, covery was made by others, and through the M. D., one of the surgeons of the Massachu- enterprise of Morton, who was actuated by vissetts General Hospital. From that time the lens of an immense fortune, its success was Deep wading through the yellow wheat, the was spread everywhere as fast as steam thoroughly demonstrated by the eminent sur-could earry it, and in a few weeks surgical geons of the Massachusetts General Hospital I sink to rest my tired feet, operations were performed under anosthesia through the enlarged facilities afforded by in all parts of the civilized world. It was that institution. Morton's intention to decodatize and disguise the other, to which he gave the name of "Letheon," and under the protection of a patent make an immense fortune out of it. He proposed to sell individual, town, county and his discovery as did Morton and Jackson. He proposed to sell individual, town, county and the setting sun.

State rights to use his patent. It was no part of his policy to publish the discovery to the world. That it was so published at the time it was the world is indebted to the surgeous aforesaid. One of the surgeous, Henry J. Biggdow, M. D., who had but recently en-J. Biggiaw, M. D., who had but recently en-tered the practice, but now Professor of Sur-where there were no railroads, and no pondergery in Harvard University, has done more to ous machinery to main his fellow-men, and advance the claim of Morton than any other the amputation of a leg or arm was an era in man. He seems to have been Morton's pro- the life of a country doctor. While he was tessional advisor. He advocated his claims in still waiting for larger operations before compublications in private letters and in every other practicable way.

Edward H. Clark, M. D., late Professor, also in Harvard University, and author of the article on "Practical Medicine in a Century of article on "Practical Medicine in a Century of the processor of the article on "Practical Medicine in a Century of the stranger, his eyes meanwhile article on "Practical Medicine in a Century of the processor, and the laters and in every discovery to some scientific journal, the laters of Wells, and Morton, and Jackson and Simpkins burst upon the world.

Summer is coming to us once more, with its flowers and its grass, and its waving trees; and naturally in our replied the stranger, his eyes meanwhile do mi weeping. American Medicine," published in the American Medicine," published in the American Medicine, "published in the American Medicine," published in the American Medicine, "published in the American Medicine," published in the American Medicine, "published in the American Medicine," published in the American Medicine, "published in the American Medicine," published in the American Medicine, "published in the American Medicine," published in the American Medicine, "published in the American Medicine," published in the American Medicine, "published in the American Medicine," published in the American Medicine, "published in the American Medicine, "published in the American Medicine," published in the American Medicine, "published in the American Me asserts in the article referred to, that "He have the advantage of priority of publication."

(Prof. Bigelow) did more than any other living person to bring it (modern amesthesia) and Jackson stand individually upon the same before the medical public of this county, and level. Long exhibited to medical men and to walks, and gather in our home circle! of Europe, to assert its real value, and to the community his operations under ether point out the best methods of utilizing it." (1842). Wells exhibited to medical men and to the community his operation of the extract-

tory of it." After these preliminary remarks, he introduces and appends to his article a And it was not Morton, but it was Warren and and though the places that once knew bing and labored paper from Prof. Bigelow, which purports to be a final review of the ether operations at the Massachusetts General Hospital (Oct. 1846), on patients to whom Morton only to Wells, Morton and Jackson; for at the time referred to, Prof. Bigelow knew nothing of Pr. Long. But being fully convinced in go of Pr. Long. But being fully convinced in go of Pr. Long. But being fully convinced in the month of the stranger of the professional and the professional and the professional and the month of the stranger of the professional and the profe long and labored paper from Prof. Bigelow, Hayward and Bigelow who performed the them, now know them no more; though

Long's discovery, antedating Morton's four and a blaze from the labors of the hospital surgeons already named.

In bringing this subject before this Association now, it is not my object to invite another controlled to originality. He says: "He who keeps his discovery, comparatively to himself, discovery, or uncovers nothing." Morton not only made no publication of his discovery, but enough to the labors of the hospital surgeons already named.

In bringing this subject before this Association now, it is not my object to invite another controversy over the ether question. All are dead, and a sufficient length of time has now elapsed for all prejudice and partiality to have subsided, and we may now ask for a fair, unbiased decision. I have enough to publication of his discovery, but enough to the hospital surgeons already named.

In bringing this subject before this Association now, it is not my object to invite another controversy over the ether question. All are dead, and a sufficient length of time has now elapsed for all prejudice and partiality to have subsided, and we may now dead of the hospital surgeons already named.

In bringing this subject before this Association now, it is not my object to invite another controversy over the ether question. All are dead, and a sufficient length of time has now elapsed for all prejudice and partiality to have subsided, and we may now dead of the hospital surgeons already named. Notwithstanding the world has enjoyed the made no publication of his discovery, but en- deavored to show that Dr. Long was the first benefits of anasthesia for a third of a century, a patent. This, however, is palliated by the resource of the surgeon and the physician, it statement, that "In those days dentists had were perfect in all their details, and the anessis yet undetermined, in scientific circles, who secret methods to which they attached a money thesia complete. That his operations were

which was delayed nearly half a century. Superiority over all others. But how long after the publication of a discovery by one party before others shall be denied a hearing?
